**Abstract :**

DE29721345 U

A plaster for a wound, comprises a liquid chamber located between an adhesive layer and a wound fleece material. The liquid chamber consists of a plastic film, and may contain e.g. a liquid or cream. The latter can be released by pressing the film between the fingers, allowing it to pass through the fleece material to the wound.

USE: The plaster is used for covering wounds and applying e.g. a cream.

ADVANTAGE: The plaster is simple to apply and is space saving.
